

Inherent Requirements for UNSW Master of Psychology (Clinical) Program

Introduction

The UNSW School of Psychology supports the right of all people to pursue the Master of Psychology (Clinical) program. The School is committed to making reasonable adjustments to teaching and learning, assessment, clinical practice and other activities to address the impact of students' disabilities so that they are able to participate in their program.

To support potential and current students' decision making, a series of inherent requirement statements have been developed. These statements specify the requirements of the Master of Psychology (Clinical) program for student admission and progression. The statements are clustered under eight domains consisting of ethical behaviour, behavioural stability, legal, communication, cognition, relational skills, reflective skills and sustainable performance. Many of the activities associated with the professional practice of a registered psychologist are time sensitive, where the capacity to perform certain activities within specified time limits is required to reduce or avoid risks to patient safety and wellbeing. The safety and wellbeing of you and others is always of paramount importance.

Students are required to undertake placement activities in mixed gender environments which reflect the Australian health care context.

Successfully completing the Master of psychology (Clinical) program at UNSW enables you to apply for registration as a registered psychologist with the Psychology Board of Australia (PsyBA), which is a partner board of the Australian Health Practitioners Registration Authority (AHPRA). The inherent requirements outlined below provide a guide for students and staff when deciding whether you are able to meet these requirements and the type of reasonable adjustments that could be put in place to allow you to complete the program without compromising the academic integrity of the program.

How to read the inherent requirement statements

If you are intending to enrol in the Master of Psychology (Clinical) program in the UNSW School of Psychology, you should look at these inherent requirement statements and think about whether you may experience challenges in meeting these requirements.

If you think you may experience challenges related to your disability, chronic health condition or any other reason, you should discuss your concerns with the [UNSW Equitable Learning Services](#) in conjunction with the UNSW School of Psychology staff, such as the Program Director. These staff can work collaboratively with you to determine reasonable adjustments to assist you to meet the Inherent Requirements. In the case where it is determined that Inherent Requirements cannot be met with reasonable adjustments, the University staff can provide guidance regarding other study options.
